PROFILE

I come from a background in clinical psychology. This has helped me develop my teamwork skills, communication, adaptability, logical comprehension, and a few others that have translated into a great help programming. Having that said, I wanted a change and a challenge. A new path that would help me craft a future that I could find interesting and with room to grow.

EXPERIENCE

FRONTEND DEVELOPER

Cloudman Labs | Nov 2022 - Present

- I implement frontend solutions with **React** and **Vue.js**. Using **JS** or **TS**, depending on the project.
- On the server side and backend architecture our apps use a combination of **Node.js** and **NestJS**.
- For server side rendering (SSR) we use **NextJS** or **Nuxt**.
- For the styling part we use **Quasar**, **Bootstrap** and/or **Sass**.
- For the testing part I have used both **Jest** and **Cypress**.
- I work closely with multidisciplinary teams, including frontend developers, backend developers, designers and project managers, to ensure a seamless integration between all parties involved in the development of a project.
- As a team we follow the **Agile** methodology and use **Jira** to be more efficient.
- In collaboration with the designers we use **Figma**. And **Confluence** for our documentation.
- In addition to carrying out my development tasks, I also actively participate in **code reviews** and **QA** tasks. Always keeping in mind **SOLID**, **CLEAN** code and **UX** principles.

APPRENTICESHIP FRONTEND DEVELOPER

ISDI Coders | 2022 - 2023

- Developing web apps with **React** & **JavaScript** or **TypeScript**. Consuming external **APIs**. Using React API **Hooks** or **Redux's architecture**.
- I collaborated with my colleagues to divide up the work, review and merge the PRs needed to present the projects.
- For the testing part I used **Jest**.
- Learned and put in practice **SOLID** principles.
